ABOUT ME

Results-oriented software developer with skilled in full-stack development, specializing in **MERN (React JS, Node JS, Express & Mongo DB)** stack. Demonstrates a strategic problem-solving approach with strong teamwork, leadership, and analytical skills. Adept in a wide array of technical skills including **React Native, JavaScript, JWT, Redux, Fast API, HTML, CSS, Material-UI, SQL, NoSQL**, and **Next JS**. Proven ability to design, develop, and deploy high-quality applications, ensuring a seamless user experience and efficient performance.

PROFESSIONAL EXPERIENCE

SLT Mobitel Head Office – R & D Lab

Intern Software Engineer *January -July (2024)*

- Built, styled, and hosted high-quality Raccoon AI Web Application with cross-platform digital experiences using **React JS, WebRTC, JWT, Redux, Fast API** and **CSS**.
 - Engineered certain backend solutions using **Node JS, Next JS**, and **Express JS** to create and manage RESTful APIs, with experience in **MySQL** for database management.
 - Developed simple mobile app frontend using **React Native**.
 - Utilized **Git** for version control and collaborative development.
 - Collaborated with product and project managers, designers, and other engineers to transform creative concepts into refined digital experiences within an agile (2-week) sprint cycle.
-

PROJECT HISTORY

Company management System for Construction Company of “Supreme Ready-mix (PVT). LTD” **(Requested from company)** - [GitHub Repository](#)

Standalone web application for managing various operations at the company, including employee management, stock management, inventory management, vehicle & machine management, product management, supplier management.

- Developed using **React** for the frontend and styled for a responsive design.
- Created and managed RESTful APIs using **Express.js** and **Node.js**.
- Utilized **MongoDB** for database management.
- Hosted the application using **Netlify**.

Machine Learning approach to identify the chronic kidney in disease Sri Lanka - [GitHub Repository](#)

Research project mainly focused areas were identifying the chronic kidney disease using symptoms, suggest ayurvedic treatments according to report, forecast future medicine requirement, suggest diet plan according to report

- Developed using **Flutter** for the frontend and styled for a responsive design.
- **Python** was used for developing the model, models were trained using **Google Colab** and leaner regression, random forest, SVM are algorithms we used.
- Created and managed APIs using **Fast API**.
- Utilized **Firebase** for database management.

Mobile Application for online Jewelry shop - [GitHub Repository](#)

A mobile application for managing stock & items, online orders, employee and deliver with cart function, authentication function and feedback function. system developed for both staff side and customer side.

- Developed using **Android Studio (Java)** for the frontend and styled for a responsive design.
- Utilized **Firebase** for database management.
- Hosted the application using **Netlify**.

Ticketing System for Public Transport Network

A web and mobile application for reserving tickets online.

- Built and styled cross platform mobile app using **React Native**, **Expo** and **React Native Paper**.
- Developed using **React** for the frontend and styled using **React Bootstrap** components.
- Used Express.js to create and manage RESTful APIs with **MongoDB** as a database.

User Power Consumption Monitoring System

Developed E-billing System for Electricity Board. After entering the consumption unit with username, system automatically generate the bill. also bill reader can add, view, update search the data with data base.

- Developed using **Java** in **eclipse** for the frontend and styled using **JavaFX**.
- Utilized **MySQL** database for manage the data.

Online Food Ordering Web Application - [GitHub Repository](#)

The application mainly focused on UI & UX. Admins have the ability to manage the food menu by adding, viewing, search and deleting food items. User friendly add to cart, payment, authentication, easy search and feedback function features giving more efficiency.

- Developed using **React** for the frontend and styled using **React Bootstrap** components.
- Created and managed **RESTful APIs** using **Express.js** and **Node.js**.
- Utilized **Json** file system, thereby admin can easily manage the data.
- Implemented a multi-level login system with **JWT** for secure access.
- Hosted the application using **Netlify**.

TECHNICAL SKILLS

Back-End: Java, JavaScript, Node JS, Express JS, RESTful web services

Front-End: React JS, React Native, Next JS, HTML5, CSS, JavaScript, Material UI, Bootstrap, WordPress

Software Testing: Jira Tool, Selenium, Postman

Database: SQL Server (SQL), Mongo DB (No SQL)

Tools and Version Control: GitHub, GitLab

EDUCATION

BSc (Hons) in Information Technology Specializing in Information Technology

Sri Lanka Institute of Information Technology (SLIIT)

2020 - 2024
