- GCE Advance level (2019)**
Physics: S, Chemistry: S, Math.: S

WORK EXPERIENCE

Software Developer – Intern
SLT Head Office R&D Lab
Jan – July (2023)

- During my internship, I spearheaded the development of the My SLT Taxi app using React Native from scratch. I took charge of all frontend aspects and also contributed to certain backend components of the project.
- I led the development of the Racoon AI web application using the MERN stack, incorporating the Material UI library. This project was primarily tailored for the utilization of SLT R&D staff. I was responsible for the majority of the frontend development within the project.

PROFESSIONAL SKILLS

PROJECT HISTORY

Company management System for Construction Company of “Supreme Readymix (PVT). LTD” (Requested from company)

-MongoDB, Express, ReactJS, NodeJS

We created complete Company Management System for Construction company by their request. Before they used mainly excel based database system. From our system we aimed mainly employees to handle their task much easier with saving reasonable time. The System mainly focus on functions such as HR management, Income, Expenses, Projects, Supplies Stock, Machines and Vehicle Management.

Final Year Research Project – Machine Learning approach to identify the chronic kidney disease in Sri Lanka

-Python, ReactJS, Google Colab, FastAPI, Postman, Firebase

We developed the machine learning based system aiming any healthcare organization to achieve their goal efficiency. In that system we proposed 4 main components. There are forecast the future medicine requirement, suggest the ayurvedic treatment to kidney patients, identify the kidney patient by symptoms, and suggest diet plan to kidney patient.

Mobile Application for Jewelry shop

- Android Studio, Google firebase

As a 2nd year 2nd semester, for 4-member mini project we developed complete mobile app for jewelry shop. The system main functions were adding order, cart, browse items and products delivery system.

Web Application for Online Computer Spare Part Store

- Java, HTML, CSS, Tomcat, MySQL

As a 2nd Year 1st semester, this project was assigned by the lecture for the completion the module assignment for our team. We had developed online spare part selling system for the user. We mainly developed ordering system, cart system and delivery system.

Online help desk for university Student

- Java Script, HTML, CSS, PHP

From that university students can help and upload inquiry and get feedback via online and also lectures or academic staff can give feedback. This is work as a like stack overflow.

I hereby attest that the above particulars are true and accurate to the best of my knowledge.

Your Faithfully,
Banuka Ishara.
